

THE MOST COMPREHENSIVE AND UP-TO-DATE RENEWABLE ELECTRICITY INCENTIVES REPORT

Available in Paperback and Digital Format

Publisher: London Research International

Publication Date: October 2011

Price: £150.00

REPORT LAYOUT

1. INTRODUCTION
2. COUNTRY ANALYSIS
 - Argentina
 - Brazil
 - Chile
 - Colombia
 - Costa Rica
 - Ecuador
 - Honduras
 - Mexico
 - Nicaragua
 - Peru
 - Venezuela

LRI's Renewable Energy Database

An online access portal for our network of renewable energy investors, project developers and professionals, providing published research and consulting expertise to major international clients.

RENEWABLE ELECTRICITY INCENTIVES IN CENTRAL AND SOUTH AMERICA, 2011/2012: Investment and Operating Support Programmes

Both the urgent need to cut GHG emissions and the contribution that renewable energy can make towards energy security is increasingly acknowledged in developed countries. For this reason, despite current unstable macroeconomic conditions, investment in the deployment of renewable electricity remains strong. However, the persistently high cost of deployment is such that government incentives continue to be required.

Incentive schemes have already been established in various countries to attract investor capital and spur development. A major challenge for renewable power developers lies in identifying which of these incentive schemes offer good value for money and the predictability needed to justify the initial capital outlay.

This report is an authoritative source allowing for quick and easy comparison of the latest incentives on offer for different renewable technologies in 11 Central and South America countries. Combining key electricity market statistics with an analysis of operating and investment incentives for each country, the report provides concise but comprehensive information regarding the climate for renewable electricity investment.

Methodology

London Research International (LRI) has drawn on its network of international consultants to conduct extensive research, based on a range of data sources in multiple languages, to secure some of the most up-to-date published information on the renewable electricity sector currently available.

Using experience gained from previous publications on the European renewable electricity sector, LRI has compiled a comprehensive report offering country-by-country information on emissions targets and electricity mixes, as well as renewable electricity operating and investment support incentives.

Target MARKET

All parties with an interest in the renewable electricity sector including **investors**, **policy makers** and **sector specialists**.
